The requirement to elect of September 20, 2005 is withdrawn.

A requirement to elect or a restriction requirement may be reapplied at a future time.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the structure of the claimed semiconductor device and illustrations of the claimed processes used in the product by processes must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement

sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claims 46-59 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The present application has undergone a metamorphosis since filed. The title when filed was "Sharpened, Oriented Contact Tip Structures". The title was changed by an amendment presented at the time of filing to "Tested Semiconductor Device Produced By An Interconnection Element With Contact Blade". Prior to entry of the amendment presented at the time of filing the claims were directed to probe structure and to a method of making the probe structure. The new claims

introduced by the amendment presented at the time of filing are directed to semiconductor devices defined by product by process. The Examiner can find no basis in the specification for claims 46-59. The specification does not mention a "probe card assembly", a "printed circuit board", a "compliant element", an "interface board" or any way of "testing semiconductor devices". No details of the semiconductor device are provided.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Luthi et al, Trenary, Littlebury et al and Eldridge et al are cited to show prior art blade probe structure.
